Chemistry and Physics
of
LIPIDS

# Subject Index

## Volume 69 (1994)

*N*-acylphosphatidylethanolamines, hydrogen bonding, headgroup size, differential scanning calorimetry, $^{31}$P-NMR spectroscopy, Fourier transform infrared spectroscopy, 229
anthrylvinyl-labeled phosphatidylcholine, fluorescence anisotropy, 1,6-diphenyl-1,3,5-hexatriene (DPH), 209
antioxidant, autoxidation, α-tocopherol, ubiquinol, azothermal initiator, lipid vesicles, 87
autoxidation, antioxidant, α-tocopherol, ubiquinol, azothermal initiator, lipid vesicles, 87
azothermal initiator, autoxidation, antioxidant, α-tocopherol, ubiquinol, lipid vesicles, 87

band 3, interdigitated lipid bilayer, DPPG, DMPC, DSC, polymyxin B, 241
binding, $Dibac_4(3)$, membrane potential, dissociation constants, lifetimes, 137

calorimetry, liposomes, phase transitions, Synchrotron X-ray, dilauroylphosphatidylcholine, 129
cerebroside(s), sulfatide, microstructure, tubule, cylinder, nonaqueous, 51
chiral discrimination, Langmuir monolayer, fluorescence microscopy, 41
chiral pool, synthetic phospholipids, phospholipid analogues, synthesis, isopropylidene-glyceraldehyde, optical purity, Mitsunobu reaction, 105
cholesterol, mevalonate, glycosylsterols, gangliosides, 167
correlated spectroscopy, polymerizable phospholipid, nuclear magnetic resonance, lipid conformation, tubules, 161 cutin, dihydroxystearic acids, high-performance liquid chromatography, stereochemical analysis, 121
cylinder, cerebroside(s), sulfatide, microstructure, tubule, nonaqueous, 51

DHA, high-resolution $^{13}$C-NMR, EPA, olefinic carbons, spin-lattice relaxation times, *Thunnus alalunga* triacylglycerols and methyl esters, 65
diacetylene, Raman spectroscopy, lipids, order, *trans* conformation, molecular probes, 251
$Dibac_4(3)$, membrane potential, dissociation constants, binding, lifetimes, 137
differential scanning calorimetry, *N*-acylphosphatidylethanolamines, hydrogen bonding, headgroup size, $^{31}$P-NMR spectroscopy, Fourier transform infrared spectroscopy, 229
diffusion, vesicle, trapping, phospholipid, DOSY, NMR, 175
dihydroxystearic acids, cutin, high-performance liquid chromatography, stereochemical analysis, 121
dilauroylphosphatidylcholine, liposomes, phase transitions, Synchrotron X-ray, calorimetry, 129
1,6-diphenyl-1,3,5-hexatriene (DPH), fluorescence anisotropy, anthrylvinyl-labeled phosphatidylcholine, 209
dissociation constants, $Dibac_4(3)$, membrane potential, binding, lifetimes, 137
DMPC, interdigitated lipid bilayer, DPPG, band 3, DSC, polymyxin B, 241
DOSY, vesicle, diffusion, trapping, phospholipid, NMR, 175
DPPG, interdigitated lipid bilayer, DMPC, band 3, DSC, polymyxin B, 241
DSC, interdigitated lipid bilayer, DPPG, DMPC, band 3, polymyxin B, 241

EPA, high-resolution $^{13}$C-NMR, DHA, olefinic carbons, spin-lattice relaxation times, *Thunnus alalunga* triacylglycerols and methyl esters, 65

fluorescence, NBD-dioleoylglycerol, phospholipid vesicles, 75
fluorescence anisotropy, anthrylvinyl-labeled phosphatidylcholine, 1,6-diphenyl-1,3,5-hexatriene (DPH), 209
fluorescence microscopy, Langmuir monolayer, chiral discrimination, 41
fluorescence microscopy, lipid monolayers, mixed phospholipids, lipoteichoic acids, phospholipid domains, 151
Fourier transform infrared spectroscopy, *N*-acylphosphatidylethanolamines, hydrogen bonding, headgroup size, differential scanning calorimetry, $^{31}$P-NMR spectroscopy, 229
free radical scavenging, tocopherol, superoxide anion, lipid peroxidation, redox reactions, 35
FTIR spectroscopy, linear dichroism, lamellar phase, reversed micellar phase, phase transition, 219

ganglioside aggregates, gangliosides, hydroxy fatty acid, 95
gangliosides, hydroxy fatty acid, ganglioside aggregates, 95
gangliosides, mevalonate, cholesterol, glycosylsterols, 167
glycoglycerolipid, mesophase, phase transition, polymorphism, LIPIDAT, 181
glycosylsterols, mevalonate, cholesterol, gangliosides, 167

headgroup size, *N*-acylphosphatidylethanolamines, hydrogen bonding, differential scanning calorimetry, $^{31}$P-NMR spectroscopy, Fourier transform infrared spectroscopy, 229

*SSDI* 0009-3084(93)02309-S

high-performance liquid chromatography, cutin, dihydroxystearic acids, stereochemical analysis, 121
high-resolution $^{13}$C-NMR, DHA, EPA, olefinic carbons, spin-lattice relaxation times, *Thunnus alalunga* triacylglycerols and methyl esters, 65
hydrogen bonding, *N*-acylphosphatidylethanolamines, headgroup size, differential scanning calorimetry, $^{31}$P-NMR spectroscopy, Fourier transform infrared spectroscopy, 229
hydroxy fatty acid, gangliosides, ganglioside aggregates, 95

interdigitated lipid bilayer, DPPG, DMPC, band 3, DSC, polymyxin B, 241
isopropylidene-glyceraldehyde, synthetic phospholipids, phospholipid analogues, synthesis, chiral pool, optical purity, Mitsunobu reaction, 105

lamellar phase, FTIR spectroscopy, linear dichroism, reversed micellar phase, phase transition, 219
Langmuir monolayer, fluorescence microscopy, chiral discrimination, 41
lifetimes, Dibac$_4$(3), membrane potential, dissociation constants, binding, 137
linear dichroism, FTIR spectroscopy, lamellar phase, reversed micellar phase, phase transition, 219
lipid conformation, polymerizable phospholipid, nuclear magnetic resonance, correlated spectroscopy, tubules, 161
lipid monolayers, mixed phospholipids, fluorescence microscopy, lipoteichoic acids, phospholipid domains, 151
lipid peroxidation, tocopherol, superoxide anion, free radical scavenging, redox reactions, 35
lipid vesicles, autoxidation, antioxidant, α-tocopherol, ubiquinol, azothermal initiator, 87
LIPIDAT, glycoglycerolipid, mesophase, phase transition, polymorphism, 181
LIPIDAT, phosphatidylethanolamine, phospholipid, mesophase, phase transition, polymorphism, 1
lipids, Raman spectroscopy, diacetylene, order, *trans* conformation, molecular probes, 251
liposomes, phase transitions, Synchrotron X-ray, dilauroylphosphatidylcholine, calorimetry, 129
lipoteichoic acids, lipid monolayers, mixed phospholipids, fluorescence microscopy, phospholipid domains, 151

membrane potential, Dibac$_4$(3), dissociation constants, binding, lifetimes, 137
mesophase, glycoglycerolipid, phase transition, polymorphism, LIPIDAT, 181
mesophase, phosphatidylethanolamine, phospholipid, phase transition, polymorphism, LIPIDAT, 1
mevalonate, cholesterol, glycosylsterols, gangliosides, 167
microstructure, cerebroside(s), sulfatide, tubule, cylinder, non-aqueous, 51
Mitsunobu reaction, synthetic phospholipids, phospholipid analogues, synthesis, chiral pool, isopropylidene-glyceraldehyde, optical purity, 105
mixed phospholipids, lipid monolayers, fluorescence microscopy, lipoteichoic acids, phospholipid domains, 151
molecular probes, Raman spectroscopy, lipids, diacetylene, order, *trans* conformation, 251

NBD-dioleoylglycerol, phospholipid vesicles, fluorescence, 75
NMR, vesicle, diffusion, trapping, phospholipid, DOSY, 175
non-aqueous, cerebroside(s), sulfatide, microstructure, tubule, cylinder, 51
nuclear magnetic resonance, polymerizable phospholipid, correlated spectroscopy, lipid conformation, tubules, 161
olefinic carbons, high-resolution $^{13}$C-NMR, DHA, EPA, spin-lattice relaxation times, *Thunnus alalunga* triacylglycerols and methyl esters, 65
optical purity, synthetic phospholipids, phospholipid analogues, synthesis, chiral pool, isopropylidene-glyceraldehyde, Mitsunobu reaction, 105
order, Raman spectroscopy, lipids, diacetylene, *trans* conformation, molecular probes, 251

$^{31}$P-NMR spectroscopy, *N*-acylphosphatidylethanolamines, hydrogen bonding, headgroup size, differential scanning calorimetry, Fourier transform infrared spectroscopy, 229
phase transition, FTIR spectroscopy, linear dichroism, lamellar phase, reversed micellar phase, 219
phase transition, glycoglycerolipid, mesophase, polymorphism, LIPIDAT, 181
phase transition, phosphatidylethanolamine, phospholipid, mesophase, polymorphism, LIPIDAT, 1
phase transitions, liposomes, Synchrotron X-ray, dilauroylphosphatidylcholine, calorimetry, 129
phosphatidylethanolamine, phospholipid, mesophase, phase transition, polymorphism, LIPIDAT, 1
phospholipid, phosphatidylethanolamine, mesophase, phase transition, polymorphism, LIPIDAT, 1
phospholipid, vesicle, diffusion, trapping, DOSY, NMR, 175
phospholipid analogues, synthetic phospholipids, synthesis, chiral pool, isopropylidene-glyceraldehyde, optical purity, Mitsunobu reaction, 105
phospholipid domains, lipid monolayers, mixed phospholipids, fluorescence microscopy, lipoteichoic acids, 151
phospholipid vesicles, NBD-dioleoylglycerol, fluorescence, 75
polymerizable phospholipid, nuclear magnetic resonance, correlated spectroscopy, lipid conformation, tubules, 161
polymorphism, glycoglycerolipid, mesophase, phase transition, LIPIDAT, 181
polymorphism, phosphatidylethanolamine, phospholipid, mesophase, phase transition, LIPIDAT, 1
polymyxin B, interdigitated lipid bilayer, DPPG, DMPC, band 3, DSC, 241

Raman spectroscopy, lipids, diacetylene, order, *trans* conformation, molecular probes, 251
redox reactions, tocopherol, superoxide anion, free radical scavenging, lipid peroxidation, 35
reversed micellar phase, FTIR spectroscopy, linear dichroism, lamellar phase, phase transition, 219

spin-lattice relaxation times, high-resolution $^{13}$C-NMR, DHA,

EPA, olefinic carbons, *Thunnus alalunga* triacylglycerols and methyl esters, 65
stereochemical analysis, cutin, dihydroxystearic acids, high-performance liquid chromatography, 121
sulfatide, cerebroside(s), microstructure, tubule, cylinder, non-aqueous, 51
superoxide anion, tocopherol, free radical scavenging, lipid peroxidation, redox reactions, 35
Synchrotron X-ray, liposomes, phase transitions, dilauroyl-phosphatidylcholine, calorimetry, 129
synthesis, synthetic phospholipids, phospholipid analogues, chiral pool, isopropylidene-glyceraldehyde, optical purity, Mitsunobu reaction, 105
synthetic phospholipids, phospholipid analogues, synthesis, chiral pool, isopropylidene-glyceraldehyde, optical purity, Mitsunobu reaction, 105
*Thunnus alalunga* triacylglycerols and methyl esters, high-resolution $^{13}$C-NMR, DHA, EPA, olefinic carbons, spin-lattice relaxation times, 65
α-tocopherol, autoxidation, antioxidant, ubiquinol, azothermal initiator, lipid vesicles, 87
tocopherol, superoxide anion, free radical scavenging, lipid peroxidation, redox reactions, 35
*trans* conformation, Raman spectroscopy, lipids, diacetylene, order, molecular probes, 251
trapping, vesicle, diffusion, phospholipid, DOSY, NMR, 175
tubule, cerebroside(s), sulfatide, microstructure, cylinder, non-aqueous, 51
tubules, polymerizable phospholipid, nuclear magnetic resonance, correlated spectroscopy, lipid conformation, 161
ubiquinol, autoxidation, antioxidant, α-tocopherol, azothermal initiator, lipid vesicles, 87

vesicle, diffusion, trapping, phospholipid, DOSY, NMR, 175
